

Training Program

on

Handling of laboratory animals and ethics

10th to 11th November, 2016

**Laboratory Animal Resources Section
ICAR- Indian Veterinary Research Institute
Izatnagar, Bareilly-243 122(U.P), India**

Introduction: Laboratory animals such as mice, rats and guinea pigs are most commonly used experimental animals for study of different biological activities in health and disease. At the cost of their life, discoveries in science being made globally. It is imperative to all of us to look in the welfare of these animals. Proper handling, care and management is an ethical requirement for any experimentation on animals while generating reliable and reproducible experimental data. Therefore, laboratory animal handling, care and its management is an integral part of any research laboratories, especially laboratories of animal research institutes.

ICAR-Indian Veterinary Research Institute is a premier institute devoted to research and education in animal health and production. Preclinical animal experimentation is being executed in almost all Divisions/Sections of this institute. Update of knowledge for proper care and management of laboratory animals is of paramount importance for the laboratory staff associated with such activities. The training program is organized to update the knowledge of proper care, management and handling of laboratory animals commonly used for animal research.

Objective of the training program: To train technical staff of ICAR-Indian Veterinary Research Institute for enriching their knowledge along with skill in management, care and handling of laboratory animals according to the animal welfare and ethical norms.

Eligibility

Candidate should be a permanent technical staff of ICAR- Indian Veterinary Research Institute.
