

Awareness Programme on Balanced Fertilizer Application and Integrated Nutrient Management (INM) Conducted under MGMG Programme

An awareness programme on “Balanced Fertilizer Application and Integrated Nutrient Management (INM)” was organized under the MGMG Programme on 20 May 2026 at Udaipur Ganesh Khera village by Team 22. A total of 25 farmers participated in the programme and actively interacted with the experts during the awareness session.

The programme focused on educating farmers about the importance of balanced fertilizer application and the adoption of Integrated Nutrient Management practices for sustainable crop production and maintenance of soil health. Farmers were informed about the efficient use of chemical fertilizers in combination with organic manures, biofertilizers, crop residues, and micronutrients to enhance soil fertility and improve crop productivity in an environmentally sustainable manner.

The team members, including Dr. J.K. Prasad, Dr. Ashim Kumar Biswas, Dr. Indrasen Chauhan, Dr. Ayon Tarafdar, Dr. Samikshya Sarangi, and Dr. M.B. Reddy, interacted with the farmers and highlighted the significance of soil testing, nutrient balance, and scientific fertilizer management practices. They also discussed methods to reduce excessive fertilizer use and promote cost-effective nutrient management strategies for better agricultural outcomes.

Farmers showed keen interest in the programme and raised several practical questions related to fertilizer application and soil management. The programme proved to be highly informative and beneficial, motivating farmers to adopt balanced and integrated nutrient management practices for sustainable and profitable farming.
